LIQUIDAPPS® KICKS OFF COMMERCIALIZATION EFFORTS AT WEB 2.0 CONFERENCE

New Application Design Product Receives Many Accolades from Users

Blacksburg, VA-May, 15, 2008- Harmonia, Inc. introduced its application design product, LiquidApps®, at the Web 2.0 conference in San Francisco, CA, in April. By all accounts, LiquidApps® was a resounding success, and garnered accolades from many of the tech-savvy conference goers.

People were talking at length about some of their favorite features of this new mashup product. Many liked the ease of use in building graphical interfaces; still others mentioned how conveniently LiquidApps® can be used by multiple code targets (LiquidApps® can generate code in five different outputs); and still others mentioned the user-friendly nature of no runtime licenses needed to operate the product.

“I couldn’t believe the number of people telling us how much they enjoyed the product,” said Jason Spangler, one of LiquidApps’ designers. “People were giving us tons of feedback, and all of it was positive.”

Prior to the Web 2.0 conference, LiquidApps® has been used in the designs of NAVAIR, NAVSEA, and in a synergistic relationship with programs designed by both Northrop Grumman and Raytheon.
